

### Salmon Weight : Length Conversion Chart for River Dee Salmon

## Dee District Salmon Fishery Board

### Guidelines:

- Keep fish in water where possible when removing hook to reduce stress.
- Use a knotless landing net to secure capture of fish and measure length from nose to fork of tail.
- Always use both hands to support fish and never lift by the tail which can damage vertebrae & kidneys.
- If no tape measure is available use a length of mono and tie a knot when length of fish recorded.
- Support returned fish, pointing upriver in current until it recovers and swims away strongly.
